

Molecular Vision Laboratory

To our clients and families,

It has been a great pleasure to serve you in the last five years. Together, we have improved genetic testing for patients with rare genetic conditions, especially eye-related cases. Your trust, valuable feedback and comments were the driving force for our continuous improvement of our platform.

We are now entering a new phase of our journey and have an exciting news to share with you. We are joining forces with Centrillion Technologies, a Silicon Valley based biotechnology company. As such, the current Casey Eye Institute (CEI) Molecular Diagnostic Laboratory will be transferred to Molecular Vision Laboratory, Inc. (MVL) starting July 1st, 2016. Despite these changes, we will continue business-as-usual to avoid disrupting or inconveniencing you, our clients. Though the laboratory name may be changed, our commitment to you will never change.

While the genetic testing industry is becoming more commercialized, we here at MVL believe that mass production by a generic method has its limitations. For instance, important gene-specific and disease-unique features can be lost in mass production. Instead, we are committed to finding mutations for every patient with inherited eye diseases and developing tests tailored specifically to those diseases. Despite the changes, we assure you that we will continue provide the highest quality service. We hope that we have your continued support.

Sincerely yours,

John (Pei-Wen) Chiang, PhD, FACMG
