

Commercial insurance billing is available through BrightDrive Healthcare Solutions for non-government carriers. Please note that the insurance billing option is for patients with medical concerns. Patients must be seen by their primary care provider first. Traditional Medicare is not accepted. If insurance is denied, patient is responsible for full test price plus an additional \$10 fee.

When making your appointment, please send a photo of the front and back of your insurance card and picture identification card along with the completed requisition form.

## **Requirements:**

- Doctor's signed prescription requesting the test(s). (The prescription must be from a healthcare provider who works with you)
- Valid insurance card
- Valid picture ID (State or Federal issued ID or Driver's License)
- Completed *signed* requisition form.
- Medical Necessity (Appropriate diagnostic codes, provider notes, etc.)

Insurance estimates are available by contacting your insurance provider. Please provide your provider with the following Tax ID number and codes for the CPT test and associated ICD-10 diagnosis. CPT codes are selected based on services performed.

**MVL Tax ID:** 81-2685042

## Diagnosis and procedure codes:

**ICD-10 code:** U07.1, COVID-19 **CPT codes:** 87637, 87426, 86328

## Testing for active infection code:

87637 - Infectious agent detection by nucleic acid (DNA or RNA); severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]), influenza virus types A and B, and respiratory syncytial virus, multiplex amplified probe technique. This is a new code for a single genetic test that can identify COVID-19, the seasonal flu, or respiratory syncytial virus (for tests that combine only COVID-19 and the flu, please use code 87636).

## **Testing for previous exposure:**

87426 - Infectious agent antigen detection by immunoassay technique (e.g., enzyme immunoassay, enzyme-linked immunosorbent assay, fluorescence immunoassay, immunochemiluminometric assay), qualitative or semiquantitative; severe acute respiratory syndrome coronavirus (e.g., SARS-CoV, SARS-CoV-2). This recently revised code is for administering an antigen test, which is quicker and simpler than other tests for COVID-19 and therefore is more likely to be done at the point of care.

86328 - Immunoassay for infectious agent antibody(ies), qualitative or semiquantitative, single-step method (e.g., reagent strip); severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (Coronavirus disease [COVID-19]). This is the code for a single-step test to identify antibodies in patients previously or currently infected with the novel coronavirus.
